Upgrades

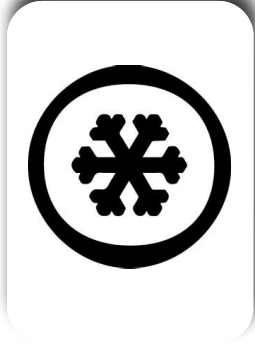

Our Projects:

General Robotics

Personal security robot

Electronic Architecture, Firmware drivers and software of 2 products.

Fenec - Energy saving solutions

Electronics, Firmware, software and zigwaves communication.

Afikim- Smart water bar

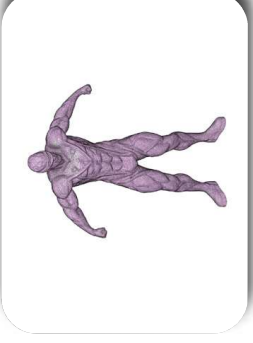

Electronics, Firmware drivers and software.

Aqua Creations

Smart light collection

LED lights - Electronic, Firmware drivers and software.

Ayayu games - VRMAN

Firmware and electrical design.

Tevel - Agricultural drone

Driver + firmware for Giga Streaming

Robotics

Our wide knowledge in robotics helps us choose the right robotic platform, with compatible modules and sensors to accelerate development and achieve innovation goals

Electronics

Designing the board and consulting on compatible chips.

Firmware

Our Imbedded programmers will develop on the desired chip set.

Communication Architecture

We specialize in WIFI, BLE, LTE, Sub Giga and real time communication.

Software

Our Full stack developers will program a smooth interface for the client side.

Implementation

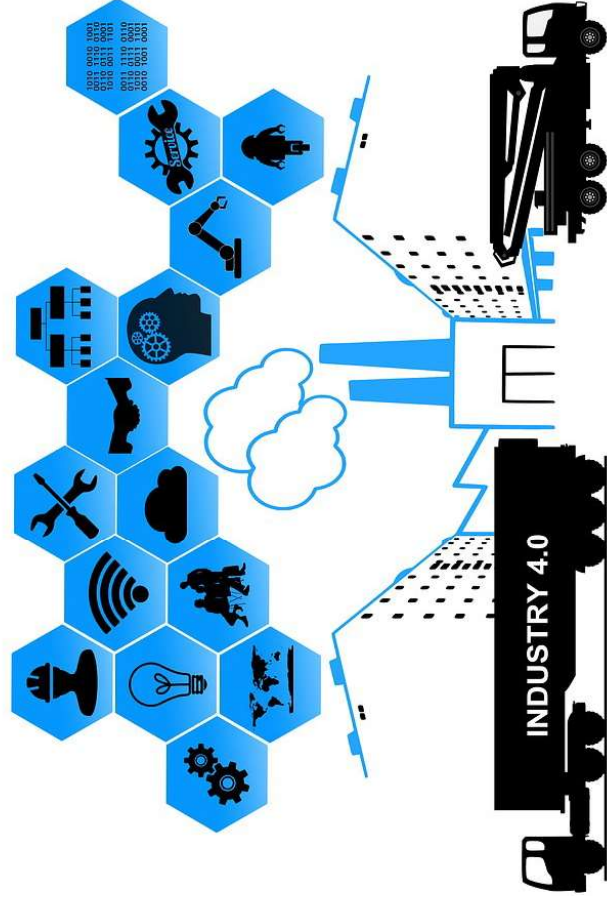

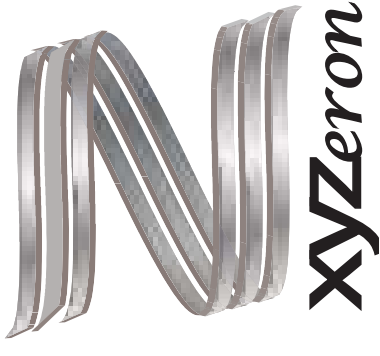

Our team will piece together the robotic platform, sensors & custom-made suits.

Technological Consulting

Helping organizations find and implement cutting edge technologies with innovative solutions that will bring valued change to their ever-changing business world.

Together with our Technological Experts we analyze, research and innovate process for your organization.

Video & Image Streaming

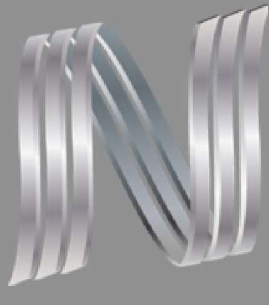

Image processing

Extracting the relevant data of each image and processing the information to display results.

Image recognition

Advance technology to display all the information from the image according to the data you are interested in.

Object extraction

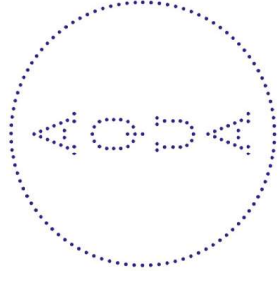

Detecting and screening the objects according to the needed solution.

Live tracking

Updating system that sends information live on an online platform at all time.
